

PROCESS WORK:

More mistakes I encountered.

200 250

* When I first, used delta time for the circle movement, my transitions (night/day) appeared like laggy or jerky due to inconsistent frame-rate

* At first, I didn't use delta time, so the circle speed was like, stuck to the program framerate.

* TimeElapsed wasn't incrementing, so the background wasn't switching appropriately

2D interactive drawing. Mistakes I run into.

* The fill colors of the shapes were swapped.

* The y of my house wasn't the right value.

* The coords of the triangle were off.

* Had to test different coords for the x_2 and x_3 of the triangle.

* Circle disappeared when spacebar pressed because it was inside the else statement.

* when the circle moves off the screen, the calculations of when it should appear were off, checking $(circle.x < -50)$
